Total Lives Lost: 258

Greater Risk of COVID-19 Complications

People 65 years and older, especially those with other health conditions

People of all ages with underlying medical conditions, particularly if not well controlled, including:

- High blood pressure and other serious heart conditions
- Diabetes
- Chronic lung disease or moderate to severe asthma
- Severe obesity
- Chronic kidney disease undergoing dialysis
- Liver disease
- Immunocompromised

Many conditions can cause a person to be immunocompromised, including: cancer treatment, smoking, bone marrow or organ transplantation, immune deficiencies, poorly controlled HIV or AIDS, and prolonged use of corticosteroids and other immune weakening medications

Take Precautions

- Continue your **medications** and do not change your treatment plan without talking to your doctor.
- Have at least a **2-week supply** of prescription and non-prescription medications.

CONTINUE TO SEEK CARE AND CALL 911 FOR EMERGENCIES

SEEKING MEDICAL CARE
