

**Coronavirus 2019 (COVID-19):
Guidance for Hospital Visitation**

This document provides guidance on the management of visitors to hospitals in the District of Columbia to reduce the risk of transmission of SARS-CoV-2, the virus that causes COVID-19. These requirements apply to any hospital licensed by DC Health.

Any individual experiencing symptoms of COVID-19 or was recently exposed to someone diagnosed with COVID-19, **must** not enter a healthcare facility as a visitor due to the risk of exposing others. Symptoms of COVID-19 may include: fever (subjective or 100.4 degrees Fahrenheit), chills, cough, shortness of breath or difficulty breathing, fatigue, muscle or body aches, headache, new loss of taste or smell, sore throat, congestion or runny nose, nausea or vomiting, diarrhea, or otherwise feeling unwell.

General Visitor Guidelines

- **When are visitors permitted?**¹
 - Visitors should be limited during the COVID-19 pandemic to reduce the chance of SARS-CoV-2 transmission.
 - Hospital patient care units may consider visitation if the following are true:
 - No suspected or confirmed outbreaks have occurred on the unit allowing visitors in the previous 14 days,
 - Robust infection control practices in place and maintained,
 - Adequate staffing including those to monitor visitation.
- **When are visitors not allowed?**¹
 - When the entire facility is on quarantine, lockdown, or undergoing testing related to a confirmed or suspected outbreak.
 - When a unit is on quarantine, lockdown, or undergoing testing related to a confirmed or suspected outbreak.
 - When the patient to be visited is under investigation (PUI) or has a confirmed positive COVID-19 infection while still in their infectious period.
- **Who can visit?**¹
 - If possible, visitors should be scheduled in advance.
 - Children under the age of 18 must always be accompanied by a guardian and must be able to comply with face covering and social distancing requirements.
 - A maximum of two visitors may visit the patient at any one time and no more than 2 different visitors per day.
 - Visitors must not be allowed to visit multiple patients within the same day.
 - Indoor visitation is limited to individuals who can comply with mask and social distancing requirements.
- **Where should visitation occur?**
 - Outdoor visitation is still preferred over indoor when patient condition allows and weather permitting.
 - Visitation space must allow for adequate social distancing (at least 6 feet between patient and visitors).
 - Indoor visitation space must meet the following requirements:
 - Maximize ventilation as much as possible (e.g., keep doors open).

¹ These restrictions do not apply to compassionate care situations or those essential to support persons with disabilities.

- Visitation space must be reserved for the patients and their designated visitors only. **Visitors in semi-private patient rooms must not be permitted when the other patient is present.**
- If a designated space is used, there must be specified entries, exits, and pathways that minimizes exposure to other patients. Staff must be available to enforce unidirectional travel to minimize patient exposure.
- The designated space must be cleaned and disinfected between visitor groups.
- If visitors are allowed:
 - All visitors must be assessed for symptoms of COVID-19 upon arrival (e.g., temperature check, symptom questionnaire).
 - Facilities will be required to furnish contact tracing data to DC Health within 12 hours of it being requested including:
 - Daily staffing assignments,
 - Daily unit census,
 - Daily visitor log including patients visited for the previous 30 days. Minimum information to include:
 - First and last name,
 - Date and time of entrance,
 - Patient to be visited and location,
 - **PLUS** at least two of the following:
 - Date of birth,
 - Physical street address including state and zip code,
 - Daytime and evening telephone number.
 - Email address, if available.
 - Visitors must not be under isolation, within 14-days of close contact with a known COVID-19 case, or awaiting test results.
 - Visitors must be screened regardless of vaccination status or previous laboratory confirmed COVID-19 infection.
 - For DC Health Travel Guidance and additional Screening Guidance, visit coronavirus.dc.gov/healthguidance.

Personal Protective Equipment (PPE) Guidelines

- Visitors should be responsible for bringing their own face mask/cloth face covering. If a visitor arrives to the healthcare facility without a cloth face covering, consider providing a face mask for source control, supplies permitting.
 - Face coverings must cover the nose and mouth and fit snugly to the face.
 - Face coverings with an exhalation valve are not permitted.
- Additional PPE is generally not required for visitors unless visiting a COVID-19 positive or PUI patient.
- Considerations for individuals permitted to visit a COVID-19 positive patient are as follows:
 - Visitors should not be issued N95 masks as they are not appropriately fit tested, however, they are permitted to wear an N95 if they have one.
 - Visitors must be informed to quarantine at home for at least 10 days after leaving the facility. Quarantine for visitors of PUI patients is strongly encouraged, but not required. If a PUI patient tests positive, visitors must be notified if the visitation took place during the patient's infectious period.
 - Staff must be available to supervise visit to ensure appropriate PPE use providing "just in time" teaching as needed.
- For more on PPE for healthcare facilities, visit: coronavirus.dc.gov/healthguidance.

Facility Guidelines

- The following guidelines are required when allowing visitation:
 - Place visual alerts, such as signs and posters in appropriate languages, at entrances and in strategic places for hand hygiene, respiratory hygiene (including the requirement of mask or cloth face coverings), and cough etiquette.
 - Provide adequate and easily accessible access to soap and water and alcohol-based hand rub with 60-95% alcohol.
 - Minimize time and use visual cues to help prevent congregating in waiting areas or checkout areas. Space chairs at least 6 feet apart to ensure individuals do not sit close together or wait in groups.
 - Have a written policy in place to ensure that:
 - Visitors are limited to only those essential for the patient's well-being and care, and must be restricted to the patient's room or other designated facility areas.
 - Only the appropriate number of visitors is allowed per person and per designated space.
 - Education for visitors is available on:
 - Signs and symptoms of COVID-19.
 - Proper wearing of face masks.
 - Performing hand hygiene by washing hands with soap and water or by using an alcohol-based hand rub (ABHR) with at least 60% ethanol or 70% isopropanol for at least 20 seconds before and after the visit and as needed.
 - Following respiratory hygiene and cough etiquette (e.g., covering mouth and nose with a disposable tissue when coughing or sneezing).
 - Adequate supplies for visitors to perform respiratory hygiene are provided and visitors with cough or other respiratory symptoms are instructed to immediately leave the facility and seek care if needed.
 - Information for adequate contact tracing is collected from visitors.
 - Appropriate temperature checks and symptom screenings are in place.
 - Visitors are provided with contact information and additional instructions for notifying the facility should they develop symptoms of or test positive for COVID-19 within 14 days of their visit.
 - Visitors are notified if the patient visited or any other patient on the unit tests positive within 14 days of a visit, and that the visitor(s) are recommended to seek testing.
 - Visitors are aware of the right to revoke, cancel or deny a scheduled visitation.
 - Staff should monitor visitations and conduct frequent observations for facemask and hand hygiene compliance to allow for "just in time" teaching as needed.
- The following guidelines are highly recommended:
 - Allow alternatives for direct interaction between visitors and patients, including setting up remote communications (e.g., telephone or internet connection) in the isolation area to allow for video or audio calls.
 - Have designated staff members available to provide training and education to visitors as needed.

The guidelines above will continue to be updated as the outbreak evolves. Please visit coronavirus.dc.gov/healthguidance regularly for the most current information.
